

The Honorable Trent Lott
United States Senate
Washington, D.C. 20510

Dear Senator Lott:

Please support S. 252, so we will stop polluting our ground water before it's too late.

Within our small community, we're learning about ground water pollution but what we're learning is that no one knows enough. Our town's water supply was tested recently. Officials said they found nitrates in the water. The problem is they couldn't tell us exactly where those nitrates came from or what they will do to us. So we're left not knowing how afraid we should be – which is a pretty scary thing!

My husband and I have one small child and we hope to have another. We want to raise them in a healthy world.

Please join us as a co-sponsor of this ground water research with this legislation.

Sincerely,

Jane Brown
